

Test task for  
**Java Backend Engineer**  
position

**SUM API**

Candidates should implement the API that returns a **Sum** of the provided parameters. API takes 2 float values as input. It is required to write integration and unit tests for this API.

Candidate should use specified tech stack as a core:

- Java
- Spring Boot
- JUnit
- Git

**Any extra initiative from candidates and use of other technologies is welcomed.**

Final results should be uploaded to any cloud Git hosting (the choice is up to candidate). Link to the repository should be sent to:
